Mandiant + Cloudflare: Improve cyber risk posture

Augment your cyber readiness, mitigate the risk of breaches, and address malicious threats through Mandiant's incident response partnership with Cloudflare

Challenge

Any business with an online presence is susceptible to long-tail events that may allow malicious attackers into its environment, causing material damage to customers and employees. The Treasury Department estimates that nearly $600 million in banking transactions were linked to possible ransomware payments in reports filed by financial services firms to the U.S. government in the first six months of 2021, an increase in more than 40% from the previous year. The increase in ransomware attacks has led to an equivalent rise in insurance claims and loss ratios for cyber insurers, pushing legacy insurance carriers to reevaluate how much coverage they can afford to offer.

Solution

As an incident response provider, Mandiant deals with active under attack situations daily, spending time and resources helping customers mitigate attacks and getting their network and web properties online. To avoid wasting time selecting a security vendor, Mandiant has partnered with Cloudflare to enable rapid referral of organizations under attack.

Cloudflare and Mandiant's partnership enables businesses to focus on their core business by improving their cyber risk posture, powered by Cloudflare's network across 270+ cities, with 142 Tbps of network capacity and large suite of security solutions. To protect mutual customers from long-tail risks like ransomware or DDoS attacks, our cyber risk partnership with Mandiant meets organizations' expectations for rapid response, while providing businesses with industry-leading security and risk coverage.

Benefits

Improved security posture: In light of the rising frequency and severity of attacks (ransomware, DDoS), improved cyber risk is vital to mitigate common threat vectors.

Mitigate attacks quickly: Organizations under attack can obtain rapid referral to incident response providers to actively investigate and mitigate attacks.

Adopt security best practices: Encourage the most vulnerable businesses to adopt proper security standards to proactively address potential vulnerabilities.

About Mandiant

Mandiant is recognized by enterprises, governments, and law enforcement agencies worldwide as the market leader in threat intelligence and expertise gained on the frontlines of cyber security. To make every organization confidently ready for cyber threats, Mandiant scales its intelligence and expertise through the Mandiant Advantage SaaS platform to deliver current intelligence, automation of alert investigation and prioritization and validation of security controls products from a variety of vendors.

About Cloudflare

Cloudflare, Inc. is on a mission to help build a better Internet. Cloudflare's platform protects and accelerates any Internet application online without adding hardware, installing software, or changing a line of code. Internet properties powered by Cloudflare have all web traffic routed through its intelligent global network, which gets smarter with every request. As a result, they see significant improvement in performance and a decrease in spam and other attacks.
